# Anti-Inflammatory Breakthrough

BY KEVIN MICHAELSON

In a remarkable turn of events, equestrian riders and trainers across the country are now blocking and preventing inflammation in horses with a treatment that has no additives and is 100% show safe, Medivet Autologous Conditioned Serum (ACS).

We're all familiar with the damage caused by inflammation. It leads to tissue destruction and joint disease that lead to pain and downtime.

Medivet ACS works by blocking, terminating, and preventing inflammation from coming back. Tested and recommended by veterinarians, Medivet ACS is not an artificial drug. It is serum created from the horse's own blood. This means you know exactly what's going into your horse.

Traditional therapies induce the Interleukin-1ra cytokine, which blocks inflammation. Both IRAP® and Medivet ACS do this. But Medivet ACS goes further, to induce 3 other powerful anti-inflammatory cytokines and upregulate multiple growth factors. This makes Medivet ACS a truly regenerative therapy.

### Why Wait For Problems?

Medivet ACS is different because it treats the cause of joint disease. "ACS helps block part of the inflammatory cascade and slows joint degeneration, but it doesn't have the same side effects that corticosteroids can have," reports Dr. Joseph Yocum, D.V.M., a veterinarian based in Danville, Kentucky.

With Medivet ACS circulating in the body, increased levels of Interleukin-10, (one of the other cytokines induced) help heal, reduce bone loss, and fight lung

issues that are the root of so many equine ailments. It's the type of natural regenerative treatment we all have been looking for.

Dr. Kristian Rhein, D.V.M., who treats elite sport horses in New York, Florida, Kentucky, and California, said: "I have been fortunate enough to work with some of the best horses in the world. I've used IRAP®. I've used PRP. But the best results I've seen in horses speak for themselves -- Medivet ACS is a breakthrough."

### Backed By Research, Used Worldwide

Medivet has invested 8 years of research and testing on its ACS product. Originally developed in Australia and now available in North America, it's a powerful weapon used to heal and prevent inflammation in horses on 4 continents. Medivet ACS can treat a wider range of health issues than traditional IRAP®, because it can be administered 3 ways: by direct site injection, IV and nebulizer. As a result, it can be used for joint and soft tissue inflammation, soft tissue repair, capsulitis, EIPH, breathing and lung problems, synovitis, and early arthritis, among others.

### Now Explore Your Options
